Respected Hiring Manager,

I was pleased to know about the opening of **Web Development Intern at Internet Brands**. Currently, I am a Senior at University of Louisiana at Monroe, majoring in Computer Science. I have more than three years of high level programming experience. I am very confident that my skills, knowledge and experience will place me in a strong position with your organization.

My latest experience is working as a full stack developer intern for University of Louisiana, which is for meeting the needs of different departments mainly in the field of web services, internet application and database manipulation. This position allowed me to work on all phases of designs and development that includes using web frameworks to create robust and interactive web pages and applications.

In addition, I have collaborated with a large team to set up testing tools and testing environments at Open Learning Exchange, Cambridge, MA. Also, I have actively participated in the phases of the Software Development Life cycle with hands-on experience in version control tools and agile methodology.

Thank you for considering my resume and application. I look forward for the possibility of an interview.

Sincerely,  
Sagun Maharjan

Ability to yield efficient results and solve critical problems is what makes me unique.  
Being a fast learner, I can grasp new technologies in no time.

Java ,Python,PHP,JavaScript,HTML5,CSS3,Nodejs,Expressjs,React,Codelgniter,J2EE,
